Global leaders driving world class innovation

The University of Newcastle (UON) Australia's School of Architecture and Built Environment has ranked 45th in the world in the QS World University by Subject Rankings.

The School of Architecture and Built Environment has a unique forward-thinking focus on managing, designing and planning for resilience in our built environments and is home to the United Nations international training centre for Disaster Risk Reduction and Recovery. The school also hosts five Architects In Residence, all recipients of the prestigious Australian Institute of Architects (AIA) Gold Medal.

UON's global reputation for excellence in education, research and innovation has also resulted in 13 of UON's disciplines being ranked in the top 200 universities in the world.

Our top performing discipline areas for 2017 are:

ANCIENT MONUMENTS – PATHWAY TO PEACE

Heritage sites across Iraq and Syria represent the cradle of human civilisation, yet they are being damaged on an unprecedented scale by fundamentalists like the Islamic State.

In a bid to document this destruction and protect the sites, a team of Deakin University researchers is collating a database of affected heritage sites in the two countries.

The information they are gathering will help to ensure allied defence organisations and local partners don't inflict further damage on priceless heritage sites.

Associate Professor Benjamin Isakhan has been leading the project for the past five years.

"Human beings have been destroying heritage sites for as long as they have been fighting wars," he said.

"What makes the situation different today is the scale. The technology exists to completely blow up a church or flatten an archaeological site with bulldozers. The destruction is unprecedented in human history, and what is lost can never be replaced, some of which is 4000 years old."

**ASSOCIATE PROFESSOR BEN ISAKHAN -
ALFRED DEAKIN INSTITUTE**

Funded by the Australian Research Council and the Australian Department of Defence, the team is exploiting technology like Google Earth to collate grid coordinates and document the condition, significance, and religious and cultural affiliation of each site.

They believe the sites are not just a record of history, but a testament to a shared past in which different cultures and religions mostly co-existed in peace.

"Key to overcoming complex religious or ethnic conflicts is a recognition of our shared history as human beings," said Associate Professor Isakhan.

"Heritage sites provide a unique window into this past and are therefore critical to developing a sustainable and peaceful future for the Middle East."

ADVANCING SOCIETY AND CULTURE

Our strong research focus on heritage, society and international development is advancing global understanding of intercultural relations, migration, racism, religion, democracy, politics and governance.

Deakin is an Australian research hub on the Middle East and has recently created an innovative Chair in Islamic Studies and Intercultural Dialogue, as well as leading the Australian

Intervention Support Hub – a new national centre that aims to counter radicalisation and violent extremism.

Across the Asia-Pacific, projects range from identifying strategies to improve equity for children with disabilities, to building "Asia Literacy," to close involvement in the UN's annual economic and social index for all countries within the region.

QS World University Rankings by Subject: Welcome

Ateek Khan
Senior Analyst
QS Intelligence Unit

Welcome to the seventh edition of the QS World University Rankings by Subject, a ranking we pride ourselves on being relevant, ever-improving, and informative to all Higher Education's manifold stakeholders. Each year we painstakingly review our methodology, data collection methods, and the scope of our analysis, and these factors come together to give QS' Subject Rankings an evolutionary character. Across the wider world, however, change over the past year appears to be both far less measured and far less understood. International cooperation is a hallmark of academia, but the national climate in two academic 'powerhouses' – the UK and USA – has, if not necessarily turned inward, become significantly more guarded. It is too soon to say what impact these shifts will have, especially as little tangible change has yet been made as a result of them. Nonetheless, whatever walls rise and whatever bridges are burned, academics worldwide will continue to reach out, share findings, and ensure that both essential teaching and the continual pursuit of knowledge remain firmly on course.

Many governments are still providing the assistance, motivation and platform to their national Higher Education system that will help them thrive on the international stage. The Chinese government, for example, has seen efforts such as Project 211 and Project 985 bear fruit, with Chinese universities featuring in 560 positions in this year's Subject Rankings. Similarly, Germany's Excellence Initiative has seen its universities hold 602 positions in the Subject Rankings, a dramatic rise from 2016's already impressive 516. Schemes

such as these are naturally aimed at improving universities in a domestic context as well as an international one, but in order to attract the most talented collection of students and faculty possible, institutions and systems which seek to improve open themselves to both influence and in turn be influenced by the international higher education landscape.

Note that while the UK and USA may seem less open than previously, this has yet to have an impact on performance – indeed, there is no mainstream appetite in either country for hamstringing the Higher Education sector. However, the UK's impending separation from the EU seems to sound an inevitable death knell for British participation in the Erasmus scheme, and suggestions that UK student visa numbers may be cut by nearly 50% do not inspire confidence in British universities receiving any special support from their government. The contrast with China in this case is particularly strong, as a key element of its HE strategy is exchanges of both faculty and students, with the potential for lasting cooperation and exchanges of ideas and best practice.

Regardless of uncertainty about the wider world, this year's Subject Rankings have once again managed to refine and improve our understanding of academic excellence across faculty areas, while still managing to add in new subjects. For the first time this year, Hospitality & Leisure Management, Sports related subjects, Theology, Divinity & Religious Studies, and Anatomy all have their own subjects, totalling an impressive 46

subject tables. The ranking itself has remained relatively stable, even more impressively, this stability accompanies the Subject Rankings taking 200 new institutions into account for its rankings. This is likely due to a combination of the strength of the QS World University Rankings by Subject methodology, as well as the continuing focus which universities are putting on developing their faculty areas.

Time and time again, we hear from aspiring students at both an undergraduate and postgraduate level, in both surveys and focus groups, that they consider subject rankings the most relevant source of information on whether an institution is right for them. For academics, subject rankings represent a medium by which their work at an institution is able to be assessed on its own merit. QS is extremely proud at the level of granularity these rankings are able to offer, and no effort is spared to ensure their reliability.

Regardless of what divisions are in place, Higher Education is a space where people from across the globe can come together to develop theories and technologies, share and foster ideas, and ultimately strengthen ties between nations. While it's difficult to guess what the consequences of recent political shifts may be, and with a number of contentious elections due to take place in the near future there may yet be even more shifts to contend with, academia remains a space for cross-border collaboration that businesses and governments alike benefit from supporting.

Ateek Khan

QS World University Rankings by Subject: 2017 Overview

John O'Leary

Editor

The Times and Sunday Times Good University Guide and member of the QS Advisory Board

The 2017 QS World University Rankings by Subject represent by far the biggest and most comprehensive exercise of its kind yet published, with more than 11,000 individual placings in 46 distinct academic areas. A total of 1,127 universities and colleges from 74 countries were assessed for the new publication.

To produce the rankings, 43 million papers indexed by Scopus were assessed and 185 million citations recorded, this total reducing to 144 million when self-citations were excluded. In addition, 305,000 responses from academics and 194,000 from employers contributed to the reputational element of the rankings.

The impressive scale of the exercise helps to explain the growing importance of subject rankings to international students. While comparisons of whole universities continue to capture the headlines, the focus on subjects is valued by students for identifying specialist institutions and universities that may not yet compete at the highest levels across the board, as well as the more familiar names.

Ben Sowter, who is responsible for the rankings as Head of the QS Intelligence Unit, said: "Subject rankings are becoming more and more influential because students are increasingly seeking more specific guidance and often choose subject before destination. The latest expansion

means we are reaching the point now where we cover most of the subjects taken by international students and can be confident about the results."

The new rankings cover a record 46 subjects, four more than last year and including a number of subjects that are not ranked internationally elsewhere. This year's newcomers are anatomy,

The 2017 QS World University Rankings by Subject represent by far the biggest and most comprehensive exercise of its kind yet published

hospitality and leisure management, sports-related subjects and theology, divinity and religious studies.

Published annually since 2011, the rankings are based on academic reputation, employer reputation and research impact. As in previous years, the methodology varies with the subject, reflecting differing priorities and the availability of data.

In art and design, for example, citations are neither as plentiful nor as important as they are in the sciences. Instead, the views of academics account for 90 per cent of the scores in a ranking dominated by specialist

institutions, led by London's Royal College of Art. In anatomy, by contrast, almost 176,000 papers were indexed for the new ranking. As a result, 25 per cent of the overall score is derived from citations and another 25 per cent on the h-index of faculty, measuring the impact of their research.

The number of institutions ranked also varies by subject, from only 50 in specialist fields such as mining engineering to 500 in globally popular subjects such as chemistry and physics. Often, many more universities were assessed – more than 1,100 in the case of physics, for example, and over 1,000 in chemistry.

Harvard and the Massachusetts Institute of Technology (MIT) dominate the rankings in terms of the number of subjects in which they lead. The two academic powerhouses based in Cambridge, Massachusetts, which fill two of the top three places in the QS World University Rankings, are top more than a third of the subjects covered in the latest rankings.

Harvard has had a particularly successful year, adding history, modern languages and statistics to the subjects in which it leads, making 15 in all. MIT tops 12 rankings, including a near clean sweep in engineering and technology. Only in mining engineering – a subject that MIT does not offer – was there a different name (the Colorado School of Mines) at the top.

Oxford is the only other university to come top in more than one subject, increasing its total to four after taking over the lead in archaeology. However, another 15 universities and colleges lead in a single subject, illustrating the value of the rankings as a means of identifying centres of excellence around the globe.

Eight of those institutions are based in the United States and three in the United Kingdom, while the others come from Australia and Hong Kong, the Netherlands and Switzerland. They include Loughborough and Sydney, which tie for the lead in sport, the only such result in the 46 subjects.

Of this year's other new subjects, hospitality and leisure management has a high concentration of specialist institutions, with the University of Nevada at Las Vegas, at the top and L'Ecole hôtelière de Lausanne close behind in second place. Six Swiss institutions feature in the top 20.

Anatomy and theology have a more conventional feel. Harvard, Oxford and Durham fill the top three places in theology, while Oxford, Cambridge and McGill take the leading positions in anatomy.

The rankings are remarkably stable year on year, with only six of the subjects featured in 2016 showing new leadership. They include some bedrock subjects, however, such as maths, where MIT has taken over

from Cambridge, and history, where Harvard is the new leader. Among the other areas of change are development studies, where Sussex is now top, and archaeology, which is another of Oxford's successes.

As in the overall QS World University Rankings, the US and UK are well ahead of other countries in most subjects. ETH Zurich is the only university in Continental Europe to top any of the rankings – earth and marine sciences – while Hong Kong University's leadership in dentistry represents Asia's only top place. Teaching and publishing in English continues to confer significant advantages, with universities in Africa, Latin America and the Middle East absent from the top ten in almost every subject. The University of Cape Town is an exception to this rule, finishing tenth for development studies.

The rankings contain growing numbers of specialist institutions that lack the breadth necessary to feature in the main QS World University Rankings. The Julliard School, in New York, continues to top the ranking for the performing arts, for example, while Wageningen University, in the Netherlands, does the same in agriculture.

This year's publication also includes five broad subject groupings for the first time. They show Oxford leading the way in the arts and humanities, followed by Cambridge and Harvard, while Harvard is supreme in the social sciences and management, a fraction

of a point ahead of the London School of Economics. MIT heads the ranking for the natural sciences, as well as the one for engineering and technology, with Cambridge in the top three in both areas and Stanford a close second in engineering.

The life sciences is in some ways the most competitive of the broad faculty areas, with 5 million papers and 26 million citations in medicine alone. Harvard remains top of this ranking, with Cambridge and Oxford the nearest challengers.

However, it is the fine-grained detail which should make the seventh edition of the subject rankings invaluable to students. The addition of more vocational subjects, such as hospitality management and sport, which are increasingly popular choices for higher education, has broadened the scope of an exercise that is used extensively by universities and other stakeholders, as well as by those seeking guidance in the search for a course.

QS World University by Subject: Students' Guide

Jack Moran
Education Reporter
QS

The seventh edition of the QS World University Rankings by Subject provide aspiring students with a resource of record scope and size as they seek to shape their educational futures. Students searching for courses in Theology, Hospitality, Sport, or Anatomy are now able to compare, at a glance, the world's universities offering a course in any of these subjects.

The addition of more subjects and consistent, carefully-considered methodology endeavour to ensure that the rankings are valuable to all, irrespective of the stage they have reached in their tertiary journey. However, the way one chooses to use them might vary depending on their precise location on that journey. For those intending to apply for any degree programme in next year's cycle, and who are therefore in the early stages of their application process, the snapshot-form of the rankings can be of great use in conducting early stage research. At this stage, they can be used to help create aspirations for the next year of your life—which universities excel in your subject, and for which ones will you aim? For those of you wishing to study a non-mainstream subject—one that is perhaps provided by specialist institutions rather than the sort of comprehensive universities overall World University Rankings tend to emphasise—scouring our subject rankings will help you determine not only which universities do, and excel in, your subject, but also those that don't.

Here, our rankings permit speedily filtering – no longer any need to trawl through the course pages of the

world's universities! If you're at the end of your immediate journey, with a multitude of choices now available to you (congratulations!) — our rankings can act as a differentiator. By focusing on important aspects about a top university—for example, how employable might a particular university make you? How good is a particular institution at research? – we empower you to identify the factors that are of greatest importance to you, and to assess which university will best help you to fulfil your aspirations. Our rankings also serve those inclined to look beyond their home country. Our global university rankings will help the globally-minded to identify

“...our QS Graduate Employability Rankings, our overall World University Rankings – detailing the world's top 920 universities..”

international excellence. For those who haven't yet considered studying abroad, we hope the worldwide perspective provided might surprise you into considering the value of an international education—thereby serving as a catalyst for further research into foreign universities, and your own global mobility.

How not to use these rankings?

Our QS World University Rankings by Subject is a source of great pride to us,

for both the breadth of information offered, and the efforts that have gone into providing a wealth of relevant, reliable data to you. However, rankings become more valuable to the user the more that they know about them. It's best to avoid perceiving the tables as the final determinant of your decision. Research, employability, and teaching quality are important – that's why we measure them! – but so are things like affordability, scholarship opportunities, social and cultural opportunities, inclusivity – to name but a few of the things that aren't measured here.

Rankings should be treated like dietary supplements: a resource that will improve the health of anybody's decision-making when used both properly, and alongside the other essential components of your informational diet: open days, peer review, university-specific research, and university fairs such as our QS World Grad School Tour.

Since rankings cannot capture every aspect of a university that might matter to you, we continue to publish a wealth of other resources to supplement and enhance your decision-making: the second edition of our QS Graduate Employability Rankings, our overall World University Rankings – detailing the world's top 920 universities – and our QS Best Student Cities rankings are great places to start, helping you construct a more detailed picture of which course, and university, can best fit your wishes and ambitions.

Jack Moran

CETYS University

*Transforming students into
global leaders since 1961*

Center of Excellence in Competitiveness and Entrepreneurship

Home to the nationally recognized CETYS MBA Program and the CETYS Graduate School of Business

CETYS University is an Institution of Higher Education founded in 1961, located in Northwestern Mexico, bordering California, USA, one of the most dynamic international regions of the world. CETYS is a three-campus university system developing well-rounded persons in Engineering, Business and the Social Sciences.

CETYS is the only university in Mexico currently accredited by the Western Association of Schools and Colleges (WASC). In addition, CETYS is accredited by the Accreditation Council for Business Schools and Programs (ACBSP) and recently received accreditation from the Accreditation Board for Engineering and Technology (ABET).

By incorporating internationalization, entrepreneurship, information literacy, industry linkages, social responsibility, and sustainability across all programs, CETYS is committed to developing globally competitive professionals that have a positive impact in today's world.

BE ON THE EDGE

ABSTRACTS SAMARA NATIONAL RESEARCH UNIVERSITY OFFERS:

- Unique school of aerospace engineering
- Master programs delivered in English
- International Summer schools
- Russian language courses

Russian scientists were pioneers of the theory behind space flight. Today, Russia continues to maintain its position as a major space power, sharing this title only with the USA.

In just two decades, our merchant city on the Volga has turned into a world centre for the aerospace industry. It was in Samara, fifty years ago, that the rocket which would take the first man into space was built, marking the start of the new space era for all mankind.

All kinds of modern space technology is manufactured in Samara today – not just for Russia, but for Western Europe and the USA, too. From rocket engines to space satellites and, of course, the Soyuz carrier rockets, the most reliable series ever to be produced. In the second decade of the twenty-first century, they alone are now used to send humans into space – to the international space station.

Of course, this would have been impossible without the extraordinary ideas, bold decisions and painstaking work of the talented scientists and engineers, employees and graduates of the Samara National Research University (Samara University). Samara University is one of the few universities in the world to provide the experience of engineering, developing, launching and operating the satellite.

QS World University Rankings by Subject: Methodology

Martin Ince

Chair of the Global Academic Advisory Board of the QS World University Rankings
and writer and journalist in the fields of higher education and science

Increased Scope, Scopus-assisted

The QS World University Rankings by Subject for 2017 continue to progress, providing the world's students with expert insight into university performance in an increasing range of subjects, moving onto yet more uncharted ground. This year, four new subjects are added to the tables: *Anatomy & Physiology, Hospitality & Leisure Management, Sports-related Subjects, and Theology, Divinity and Religious Studies*. This increases the scope of the rankings project to 46 subjects, and each new addition represents the first time that students, parents, and educators across the world have been able to consult an international ranking of institutions offering that subject.

Though the breadth increases, the underlying methodology remains the same, ensuring consistency and coherence of approach. Two of these, *Academic Reputation* and *Employer Reputation*, are used in all of our subject rankings, and in the overall QS World University Rankings. They are based on our surveys of academics and employers around the world. This year's results are based on our Intelligence Unit assessing approximately 500,000 responses, including 305,000 responses to our *Academic Survey* and 194,000 responses to our *Employer Survey*.

Academic respondents are asked to enumerate the subjects in which they have acquired expertise, and then which universities are the best in the world in those subjects.

They are able to select up to thirty institutions, but are, naturally, unable to choose their own.

Employers are asked to name the institutions from which they have hired high-quality graduates, but are also asked to name the type of graduate they are *most likely to recruit*. If a firm hires only medics, for example, its responses are weighted more heavily in the compilation of our *Medicine* rankings than if they hire any type of graduate. We give an intermediate weighting to their opinion if *Medicine* is one of a range of disciplines from which they recruit graduates.

The other two indicators measure institutional research prowess, and specifically with the publication output and quality of an institution's research. As ever, the data conducive to the compilation of these indicators is provided by the *Scopus* database, a subsidiary of scientific publishing experts Elsevier, and cover a five-year time interval. It is worth, briefly, acknowledging the size of the operation here: this year's rankings involved the analysis of millions of papers, and tens of millions of citations.

Publishing Cultures

The first indicator measures the citations of papers for each subject from each university over that period, an acknowledged indicator of research influence. The final measure is each university's H-index for each subject. This indicator is intended to capture the institution's breadth of research as well as its quality. If a university has 19

Chemistry papers over five years with 19 or more citations each, its H Index for *Chemistry* is 19. Because different academic subjects each have unique publishing environments, the weighting we apply to research indicators varies to reflect this reality. In *Medicine*, the most publish-or-perish of all disciplines, we use citations and the H Index to account for 25 per cent each of a university's possible score. We count citations data on more than twenty-one million papers in our medical ranking, by some distance the biggest paper count for any of our 46 subjects.

Conversely, one of our new subjects, *Hospitality & Leisure Management*, has recorded under 50,000 citations over that same five-year period. Therefore, here, citations performance accounts for only five percent of an institution's final score, and H-index is not counted at all. There are other subjects such as *Art & Design* for which there are too few papers for statistical significance. Here, the ranking is based solely on expert survey responses. The 46 subjects ranked in our 2017 ranking vary vastly in terms of the shadow they cast on the academic scene. In their very different ways, *Physics* and *Economics* both feature in the offerings of any full-service university. That is why we rank 500 universities for *Physics*, and a lesser but still impressive 200 for *Communication & Media Studies*. We can reach this level of precision due to the number of academics and employers researching or employing in this subject, and sufficient papers and citations exist to permit more extensive analysis of publishing impact.

In other subjects, there may be fewer departments, fewer informed observers, and fewer publications. An example is *Mining Engineering*. Here we publish only the top 50 institutions.

Methodological Nuances

We retain one further significant improvement to the 2016 QS World University Rankings by Subject. That enhancement concerns the small cohort of papers that are co-authored by an exceptionally large number of institutions – papers typically found in big-science subject areas such as high-energy physics, cosmology or genomics. Here, a conundrum exists: on one hand, equally crediting each institution named on each such paper full credit for that paper's content risks giving such publications too large an influence over citations scores.

However, it is not practical or meritorious to give each institution a share of the credit. Doing that would discourage research cooperation across institutions of all sizes. The solution we adopted was, and is, to omit from our calculations any paper with more than 99.9 per cent of the average number of institutional affiliations for that subject. (Remember that we are counting institutions, not authors. Ours is a ranking of universities, not of people.)

This replaces the previous system of omitting all papers with more than ten institutional affiliations, which unfairly penalised a small number of big-science subjects. It resulted in the omission of 37,000 papers in Medicine and exactly three in

"Our four new subjects for 2017 are very different in nature and discipline"

Accounting & Finance.

New Subjects

Our four new subjects for 2017 are very different in nature and discipline from those we added in 2016. First, we see *Sports-Related Subjects*, an interesting subject with regards to categorization. The study of sport incorporates a range of disciplines, from the study of injury prevention (a subject best categorized in the *Life Sciences & Medicine* group) to the study of sporting psychology (Social Sciences & Management), to the broader 'Sports Studies' qualification. In this unique instance, when the subject skillsets traverse numerous disciplines, we decided that the subject most naturally fitted into the *Social Sciences & Management* category: a classification that acknowledges both the scientific and sociological components of sporting study. Here, Loughborough University and the University of Sydney take joint top-spot.

Next comes another subject best placed in the *Social Sciences & Management* category, *Hospitality & Leisure Management*. Though this ranking only sees the top 50 universities ranked, our Intelligence Unit were able to source over 1100 institutions offering a degree program suitable for this ranking. We eagerly anticipate responses

to this *de facto* pilot, and expect expansion in future years.

If a ranking of schools offering *Hospitality & Leisure Management* programs measures performance in a subject with clear commercially-oriented content, our third new subject, *Theology, Divinity & Religious Studies*, is at the opposite end of the commercial-theoretical spectrum. Here, the presence of only 37,000 papers and relatively few employer respondents hiring in this area – more than enough for statistical significance, but fewer than we receive for the Life Sciences – means that *Academic Opinion* scores contribute 70% of an institution's final rank. 100 institutions are ranked, but, with over 1100 institutions proving relevant programs, there is again substantial scope for expansion.

Our final new subject, *Anatomy & Physiology*, is a source of great excitement, for it represents, as with our *Engineering* disciplines, an opportunity to start anatomizing university performance in a subject previously represented as homogeneous: Medicine. With over 175,000 papers specifically relating to this subject sourced, and a pleasingly high initial response rate to both surveys, we envisage further scope for allowing prospective medics to compare university performance in their desired speciality. Watch this space.

TIME-HONoured TRADITIONS AND HIGH TECHNOLOGIES

Belgorod State National Research University is a member of the Association of the Leading Universities of Russia, a member of the International Association of Universities, a head university of The Shanghai Cooperation Organization (Uni-SCO) Network University in Nanotechnology, Area Studies, Ecology, Economics and Pedagogy

11

institutes and
faculties

157

international
agreements

18

joint programmes with foreign
university-partners, 10 of which
are double degree programs

55

research centers and laboratories, High
technologies Technopark, Botanical
Garden and a polyclinic

Priority research areas

material science,
nanotechnologies,
radiation physics, life
sciences, IT, humanities
and social sciences

20000

students, of which there are
representatives of all Russian
regions

and

2500 students
from **80** foreign
countries

Academic exchange programmes

with foreign university-
partners from the
Netherlands, Germany,
France, Serbia, China and
Kazakhstan

English-taught
programmes leading
to long undivided first
(Specialist) and Master's
degrees

Collaboration in projects

within the European programme
Erasmus+ with the universities
from the Netherlands, Germany
and Bulgaria

Participant

of international scientific
mega-projects to search for
dark matter "DarkSide-50"
and "DarkSide-20k"

One of TOP-20

Russian universities
(ranked 19th in the

Overall Ranking and 17th in Research)
according to the Interfax National
University Ranking 2016.

Ranked 151-200 in QS University
Ranking: BRICS 2016 and QS
University Ranking: EECA 2016

A world-class university

Number 1 in Australia for graduate employability.

Number 1 in Australia for medicine, architecture, English language and literature, anatomy and vet science and number 1 in the world for sports-related disciplines.

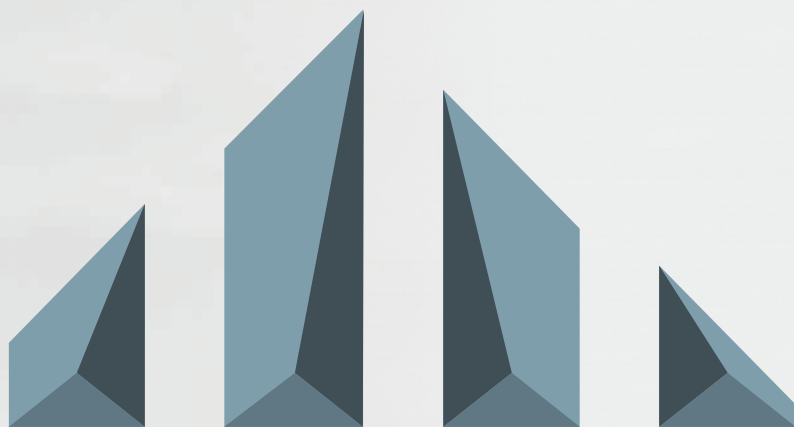

We are consistently ranked in the top 50 universities worldwide and number 1 in Australia across seven subject areas, upholding our reputation for global leadership in research and education.

Leadership for good starts here.

Turning Today's Potential into Tomorrow's Accomplishments

At PolyU, we impart knowledge, impact lives.
We nurture youngsters to become pillars of
the future.

Our innovative model of education combines professional
knowledge with service-learning and real-world experience,
with the objective of nurturing students who can excel in their
chosen professions and serve as responsible global citizens.

We challenge boundaries and uncover knowledge that brings
positive changes to the world. We find cures and fight poverty.
We shape fashion trends and make the world greener.

If you're passionate about making the world a better place,
we invite you to be part of our journey.
